

The Aparavi Platform is a cloud-based platform that finds, automates, governs, and consolidates distributed data to tackle your growing demands on RStor - the industry's most data independent storage for unstructured data.

RStor Use Cases with the Aparavi Platform

Intelligent search, find, advanced classification and automation help users classify, protect, and optimize their growing data for organizations utilizing RStor for distributed file and object storage use cases.

Understanding where your data is and what it costs with distributed file and object storage solutions, making efficient use of RStor ecosystems, at predictably lower costs than industry standards with no extraneous charges.

Improve industry-leading backup applications and tools with faster file recovery, long-term file retention, file migration between clouds and search of anything and everything across the enterprise and clouds.

Automated Data Governance, Risk & Compliance – The Aparavi Platform is built for streamlining the most demanding data use cases including ever growing compliance challenges, ensuring every effort to keep the data in RStor, available to both the authorized users and secured against electronic intrusion and physical misappropriation.
